

*Plesiochleidochasma normani* (Livingstone, 1926). Tilbrook, Hayward & Gordon, 2001, p.98.

*PLESIOCHLEIDOCHASMA NORMANI* (LIVINGSTONE)

*Lepralia porcellana* var. *normani* Livingstone, 1926:  
92, pl. 8, fig. 1.

*Plesiochleidochasma normani*: Soule, Soule & Chaney,  
1991: 474, pl. 3, fig. 3, pl. 4, fig. 4; Hayward &  
Ryland, 1995a: 565.

*Schedocleidochasma porcellanum*: Ryland & Hayward,  
1992: 287, fig. 27e.

*Remarks*

*Plesiochleidochasma normani* appears to be widely distributed in the western Pacific. Soule *et al.* (1991) recorded it from many of the Southwestern Pacific island groups including Vanuatu, as well as Indonesia, Tonga, French Polynesia, and Hawaii. Ryland & Hayward (1992) reported it (as *Schedocleidochasma porcellanum*, see Hayward & Ryland, 1995a) to be very common at over 20 of the sites they sampled at Heron Island, Great Barrier Reef. It was not found in the material examined for the present study, however.
