

*Stylopoma mauritiana* Tilbrook, 2001. Tilbrook, 2006, p.190, pl.40A,B.

**Stylopoma mauritiana** Tilbrook, 2001  
Plate 40A-B

*Stylopoma duboisii*: Hayward, 1988: 317.

*Stylopoma mauritiana* Tilbrook, 2001: 22, fig. 9A-C.

Type material Holotype: NHM 1891.8.18.1, Mauritius.

Other material examined SBMNH 365575, 411-84.

Remarks *Stylopoma mauritiana* is best characterised by: its primary orifice, straight, proximal border with a slit-like median sinus and shallow, denticulate, condyles; its suboral avicularia, proximal to the sinus, extending to the proximo-lateral corner of the orifice, triangular proximally, mandible acutely triangular.

*Stylopoma mauritiana* is most similar to *S. velatum* Tilbrook, 2001 in terms of its primary orifice and to *S. horarium* in terms of its suboral avicularia.

Distribution *Stylopoma mauritiana* was originally recorded from Mauritius, New Guinea and the Great Barrier Reef. In the Solomon Islands it was found at Raun Island, Yandina, Mbanika Island, Russell Islands.
